

Project Republic\_ZEB focuses on the energy and CO<sub>2</sub> emissions associated with existing public buildings and their refurbishment towards nZEB (nearly Zero Energy Buildings).

Objectives include:

- Assess energy consumption and CO<sub>2</sub> emissions of public building stock through country-specific evaluation
- Develop a framework and methodology for the definition of a nZEB concept for public buildings
- Define standardised "packages of measures" for refurbishment of public building stock towards nZEB

Republic\_ZEB has twelve project partners across the South-Eastern European region:

Co-funded by the Intelligent Energy Europe Programme of the European Union
